

國立嘉義大學99學年度
生物事業管理學系碩士班招生考試試題

科目：統計學

* 僅可使用試務單位提供之計算機

1. Please answer the following questions in details. Any answer with no explanation or calculation procedure will yield 0 point. (5% for each question)

- (1) Please estimate $\sum_{i=1}^n (x_i - \mu)^2$?
- (2) What are different between coefficient of variation and variance?
- (3) If $f(x)$ is a probability density function (p.d.f) and $f(0)=0.9$, $f(1)=0.08$, $f(2)=0.02$.
Please compute population variance and median.
- (4) What's the meaning of central limit theorem?
- (5) What is the unbiased estimator?

2. Given a sample linear regression model to be $Y_i = \beta + X_i + \varepsilon_i$, where $i = 1, 2, \dots, n$,

- (1) Please estimate the parameter β through least square method. (15%)
- (2) Estimate the above simple regression using the data. (10%)

x	4	-2	3	0	1
y	5	0	3	0	2

3. A random sample of 250 households in a large city revealed that the mean number of televisions per household was 2.76. From previous analyses we know that the population standard deviation is 1.8.

- (1) State the appropriate hypotheses if we wish to determine that the true mean number of televisions per household is at least 2.5. Calculate the p-value. Based on the p-value, can we conclude the true mean number of televisions per household is at least 2.5 at the 5% significance level? (5%)
- (2) Will you change your answer in (1) if you discover that the numbers of televisions per household in the large city are not normally distributed? Explain your answer. (5%)
- (3) Compute the probability of a Type II error if the true mean number of televisions per household is 3, and the power of the test. (10%)
- (4) Interpret the meaning of the power for this example. (5%)

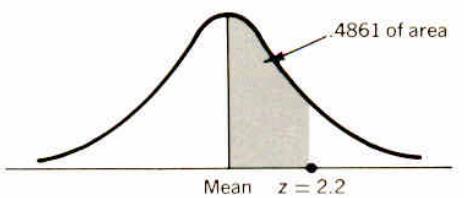

4. 嘉大花卉公司有兩位業務員，工作內容為爭取各大公司的植栽維護。花卉公司的老闆在分析幾個月的成交案件資料後，獲得業務員王先生和李先生每月成交資料的聯合機率分配如下，其中隨機變數X與Y分別代表王先生和李先生的每月成交件數。

		0	1	2
Y	0	0.08	0.14	0.12
	1	0.09	0.17	0.13
2	0.05	0.18	0.04	

- (1) 王先生和李先生每月各至少成交一件(含一件)案件的機率為何? (5%)
- (2) 求王先生每月成交案件的期望值? (5%)
- (3) 王先生和李先生每月成交件數相互獨立嗎？請解釋理由。 (5%)
- (4) 花卉公司只有王先生和李先生兩位業務員，因此這兩位的成交件數總和即是花卉公司的成交件數。求花卉公司每月成交件數的機率分配。 (10%)

STANDARD NORMAL PROBABILITY DISTRIBUTION

Areas under the Standard Normal Probability Distribution
between the Mean and Successive Value of z .*

EXAMPLE: To find the area under the curve between the mean and a point 2.2 standard deviations to the right of the mean, look up the value opposite 2.2 in the table; .4861 of the area under the curve lies between the mean and a z value of 2.2.

z	.00	.01	.02	.03	.04	.05	.06	.07	.08	.09
0.0	.0000	.0040	.0080	.0120	.0160	.0199	.0239	.0279	.0319	.0359
