

# 國立嘉義大學 100 學年度

## 應用數學系碩士班 (乙組) 招生考試試題

### 科目：機率統計

說明：(1)本試題有機率、統計二大部分，各佔 50 分。  
 (2)本試題為計算、證明題，請標明每部分的題號，同時將過程作答在「答案卷」上。  
 (3)統計部分，計算過程如有需要常態曲線下之面積數值，請參考題目後面之附表。

#### 一、機率部分：

1. Let the joint p.d.f. of  $X_1$  and  $X_2$  be

$$f(x_1, x_2) = \begin{cases} x_1 + x_2, & 0 < x_1 < 1, 0 < x_2 < 1 \\ 0, & \text{elsewhere} \end{cases}$$

(1) Find the conditional density  $f(x_2 | x_1)$ . (7%)

(2) Are  $X_1$  and  $X_2$  independent variables? Why? (8%)

2. Show that the random variable  $X$  is distributed as Bernoulli with the success probability of  $p$  if and only if  $E(X^n) = p^n$ ,  $n=1, 2, \dots$ . (10%)

3. Suppose that  $X$  has the geometric distribution with parameter  $p$ , then  $P(X \geq n) =$  where  $n \in \mathbb{N}$ . (10%)

4. Let  $X$  and  $Y$  be two random variables defined on the sample space and suppose that  $Y$  has finite variance. To show  $Var(X+Y) = Var(X) + Var(Y) + 2Cov(X, Y)$ . (15%)

#### 二、統計部分：

1. Let  $X_1, X_2, \dots, X_n$  be a random sample from an exponential distribution with probability density function

$$f(x) = e^{-(x-\theta)}, \quad x > \theta,$$

where  $\theta$  is a location parameter of the distribution.

(1) Find the maximum likelihood estimator (MLE) of  $\theta$ . (8%)

(2) Find the moment estimator of  $\theta$ . (7%)

2. Consider the problem of testing  $H_0: \mu \geq 400$  versus  $H_1: \mu < 400$  with standard deviation  $\sigma = 30$  and at the significance level  $\alpha = 0.02$ . The probability of type II error of test is  $\beta = 0.1$  at the alternative  $\mu_1 = 385$ . Find the sample size based on  $\alpha$  and  $\beta$  risks. (10%)

3. If  $X_1, X_2, \dots, X_n$  are independent r.v.'s, to construct the MP test of the hypothesis  $H$  that the common distribution of the  $X_i$  is Binomial(1, 1/2) against the alternative  $A$  that it is Binomial(1, 2/3) at level of significance  $\alpha = 0.05$ . (10%)

4. Let  $X_1, X_2, \dots, X_n$  be random sample from uniform distribution with parameter  $\theta$ , i.e.

$$X_i \sim U(\theta, 2\theta), \quad i=1, 2, \dots, n.$$

$$T_1 = \frac{n+1}{2n+1} \sum_{i=1}^n X_i, \quad T_2 = \frac{n+1}{5n+1} \sum_{i=1}^n X_i^2$$

where  $X_{(1)} = \min\{X_1, \dots, X_n\}$  and  $X_{(n)} = \max\{X_1, \dots, X_n\}$ . Show that  $T_1$  and  $T_2$  are unbiased estimators of  $\theta$  and  $T_2$  is an efficient estimator. (15%)

Table: Area  $\Phi(x)$  under the standard normal curve to the left of  $x$

| z   | .00   | .01   | .02   | .03   | .04   | .05   | .06   | .07   | .08   | .09   |
